Aircraft catering glass

## Tradition since 1892

**RONA has a strong export position, qualified personnel and the most modern technologies. The glassworks in Lednické Rovne, Slovakia is one of the world leaders in the processing of lead-free beverage glass known as crystalline.**

**96% of production** is exported and is available in more than **80 countries** worldwide. The **yearly production** of the company **exceeds 60 million** pieces.

### 1. Enviromental friendly

The special RONA glass composition known as crystalline does not contain lead or any other pollutants or toxins. This makes it safe for your health.

### 2. Design and sound

RONA glass is fragile, with unambiguous sound, as brilliant as a diamond. You will discover its beauty at first sight and your lips will taste of the essence of the glass art.

### 3. Improved resistance

The products are specially strengthened in places where they are particularly vulnerable. Glass is more resistant to scratches and strong impacts.

### 4. Brilliance and clarity

Infinite transparency without milk coating is guaranteed by the use of a rare element of the highest quality erbium used by only a few world producers.

### 5. Dishwasher safe

The special and unique glass composition ensures 1000 cycles in the dishwashers for RONA glasses with long lasting brilliance.

# Customization

**RONA glassworks is capable of using an almost unlimited variety of decorating techniques to embellish the clear glass.**

Such as pantograph etching, diamond cutting, hand painting of metallic rims (gold and platinum), hand painting of luster colors, spraying of organic colors, sand blasting, screen printing, and applying decals.

## Laser engraving

Once your logo is programmed into the engraving machine, the laser converts light energy into heat, and directs that onto your item. Use laser engraving for your detailed logo, or in conjunction with other decoration methods.

## Sandblasting

Spraying particles of sand under high pressure against a surface of glass. As the sand particles strike the surface, they create a smoother and more even texture of your chosen decoration which becomes permanent. The possibilities of sandblasting are endless and the durability is unmatched.

## Pad printing

Also called tampography or tampo printing, is typically used for applications where print quality, precision or a complex shape are involved. It is cost-effective, provides multiple color options and delivers detailed, high-quality image on your glass.

## Screen printing

Also silk screen printing is a printing technique in which ink is pressed through a mesh screen onto glass. Screen printing is a reliable and effective way of printing and continues to be popular due to its effectiveness and flexibility in achieving stunning results.

## Decal

Is a decorative technique by which engravings and prints are transferred onto your glass. Decal is a special technique, which can make the decoration vivid and enduring.
